

PAPYRUS TOPICS

UG Category:

Regenerative medicine

Emerging technologies for sustainable environment

Advances in industrial waste management in chemical and allied industries

Innovations in packaging technology

Novel processes for useful product development

Recent advances in paints and polymer

Novelties in textile printing, colouring and dying

Open Category:

Process intensification opportunities in chemical and allied sectors

Extraction and purification of valuable ingredients from natural resources as well as from waste

Current innovations in renewable and non-renewal energy utilization and management

Modern methods in drug discovery, design and delivery

Pure, applied and green chemistry for sustainable technology

Advancements in Nano-Sciences and Technology

Innovations in textile processing and Technology
